

ABSTRACT OF THE DISCLOSURE

A container garden for producing seedlings for grazing by a pet, in particular a cat. The invention consists of a container and closure therefor and a sack formed from a mesh material, such as a nylon stocking material, that a mixture of a plant growing medium, such as mix of potting soil and vermiculite, and selected seeds, such as wheat, barley, oats, rye and catnip seeds, are maintained in, and the sack is closed into a pouch for fitting into the container that receives a lid fitted thereto. The container is to receive and hold water to sprout the seeds that grow into seedlings that pass through the mesh material openings.
